Contents of Volume 5

January

P. C. Y. Chan and *J. J. Cebra:* Structural studies of products of antigen–antibody-complement interaction 1

K. J. Turner and *V. Krishnapillai:* The influence of IgM antibody on the neutralisation of T4r bacteriophage by IgG antibody 9

P. C. Y. Chan and *J. J. Cebra:* Isolation and purification of the fourth component of guinea-pig complement 17

Justus Gelzer: Immunochemical study of β-corticotropin-(1–24)-tetracosapeptide 23

Anne B. Wilson and *J. L. Turk:* Protein synthesis in lymph nodes during the development of contact sensitivity in the guinea-pig 33

Stanley J. Gross, Dan H. Campbell and *Howard H. Weetall:* Production of antisera to steroids coupled to proteins directly through the phenolic A ring 55

Yasuo Yagi, Urs. S. Rutishauser and *David Pressman:* Release of anti-L chain antibody from antigen–antibody complexes by Fd fragment 67

F. Kierszenbaum and *W. B. Dandliker:* Purification of antiovalbumin from specific precipitates by gel filtration 75

Joseph E. May and *Ray. K. Brown:* The immunologic role of methionine and cysteine residues in ribonuclease 79

Bruce W. Hudson: An investigation of the effect of antigen concentration on protein antigen–antiprotein association constants 87

Review Article:

John R. Cann: Recent advances in the theory and practice of electrophoresis 107

Communication to the Editors:

S. E. Aw and *J. R. Hobbs:* Immunokinetic differences among human pancreatic, salivary and milk alpha-isoamylases 135

Book Review 139

March

Tai-June Yoo and *Charles W. Parker:* Fluorescent enhancement in antibody–hapten interaction l-anilinonaphthalene-8-sulfonate as a fluorescent molecular probe for anti-azonaphthalene sulfonate antibody 143

Neil R. Cooper and *Hans. J. Müller-Eberhard:* A comparison of methods for the molecular quantitation of the fourth component of human complement 155

W. B. Dandliker and *S. A. Levison:* Investigation of antigen–antibody kinetics by fluorescence polarization 171

R. J. Hill: An evaluation of a method of quantitative radial immunodiffusion 185

Communications to the Editors:

H. Hugh Fudenberg, Edwin R. Gold, Girish N. Vyas and *Malcolm R. Mackenzie:* Human antibodies to human IgA globulins 203

Diego Segre and *Mariangela Segre:* Hemolytic plaque formation by mouse spleen cells producing antibodies to ovalbumin 206

Announcement 213

May

Frederick Aladjem, Rita L. Paldino, Rupert Perrin and *Fu-Wu Chang:* On the mechanism of immunodiffusion 217
A. Froese: Kinetic and equilibrium studies on 2,4-dinitrophenyl hapten–antibody systems 253
Oliver A. Roholt and *David Pressman:* Structural differences between antibodies produced against the same hapten by individual rabbits 265
Leon W. Hoyer, Wilton E. Vannier and *Lois Renfer:* Antibody elution from hapten–cellulose immunoadsorbents: the effects of hapten structure, pH and salt concentration 277
H. U. Keller, V. Nussenzweig and *E. Sorkin:* Studies on chemotaxis—VIII. The role of $7S\gamma_1$ and $7S\gamma_2$ guinea-pig antibodies for chemotaxis in granulocytes 293
Shinichiro Watanabe, Kei Tsuzurahara and *Masayasu Kitagawa:* Divalent 5S fragments obtained from rabbit IgG antibodies by tryptic hydrolysis 297
Communications to the Editors:
William D. Linscott: Complement: purification of the first component from rabbit and guinea pig serum 311
Sister Joan Givas, E. R. Centeno, M. Manning and *A. H. Sehon:* Isolation of antibodies to the C-terminal heptapeptide of myoglobin with a synthetic peptide 314
George H. Wirtz: Enhancement by butanediamine of the reaction of the first component of complement with EAC′4 318
Karl A. Traul and *Frank W. Chorpenning:* Immunospecific staining of serologically-active lipids 320

Erratum 325

July

Immunoglobulin E. A new class of human immunoglobulin 327
F. M. Dietrich: Serological cross-reactions between mouse serum albumin and various heterologous albumins 329
Anil Saha, Margaret Ann Edwards, Austin U. Sargent and *Bram Rose:* Mechanism of cryo-precipitation—I. Characteristics of a human cryoglobulin 341
W. B. Dandliker and *V. A. De Saussure:* Antibody purification at neutral pH utilizing immunospecific adsorbents 357
M. H. Freedman, A. L. Grossberg and *D. Pressman:* Participation of amino groups in the active sites of antibodies 367
Shoichiro Irimajiri, Edward C. Franklin and *Blas Frangione:* Some chemical and biological properties of the F′/c fragment of human γG globulins 383

Communications to the Editors:
Nico A. J. Mul and *Rudy E. Ballieux:* Immunologic specificity of the antibody fragments (Fab) of G- and A-immunoglobulins 399
Stewart Sell and *Stephanie J. Hughes:* Further characterization of rabbit immunoglobulin allotype Ab9 401

September

Richard A. Patrick and *George H. Wirtz:* The inhibition of guinea pig complement by human serum fractions 405

John K. Inman and *Ralph A. Reisfeld:* Differences in amino acid composition of papain Fd fragments from rabbit γG-immunoglobulins carrying different H chain allotypic specificities 415
Jean-Pierre Vaerman and *Joseph F. Heremans:* The immunoglobulins of the dog —I. Identification of canine immunoglobulins homologous to human IgA and IgM 425
D. Michaeli, H. Kamenecka, E. Benjamini, J. R. Kettman, D. Y. K. Leung and *R. C. Miner:* Immunochemical studies on collagen—I. The binding and precipitation of guinea-pig skin collagen and gelatin with rabbit anti-collagen 433
J. Koscielak, S. Hakomori and *R. W. Jeanloz:* Glycolipid antigen and its antibody 441
C. Mihaesco and *M. Seligmann:* Peptic split products of human IgM globulins 457
Marian Elliott Koshland, Ralph A. Reisfeld and *Sheldon Dray:* Differences in amino acid composition related to allotypic and antibody specificity of rabbit IgG heavy chains 471
Marianne M. Dorner and *Elvin A. Kabat:* Immunochemical studies on dextrans —VI. Reactivity with antidextran of low molecular weight dextran and its iron–dextran complex ("Imferon") 485
Dianna E. van Orden: A technique for microimmunoelectrophoresis in acrylamide gels 497

Communications to the Editors:
Emmanuel Shapira and *Ruth Arnon:* Effect of immunization course on inhibitory capacity of antienzyme antibodies 501
Ralph A. Reisfeld and *John K. Inman:* Amino acid composition of rabbit IgG light chains with b6 allotypic specificity 503
Renata E. Cathou: A rapid fluorescence method for the determination of the equivalence zone in the precipitin reaction 508

November

Mary Lou Ernst, Ruth Arnon and *Michael Sela:* Cleavage of horse immunoglobulin by cyanogen bromide 513
Karre J. Lindqvist: A unique class of rabbit immunoglobulins eliciting passive cutaneous anaphylaxis in homologous skin 525
R. Gisler et *J. Pillot:* Activité anticardiolipide liée à un complexe macroglobuline de Waldenström—IgG cryoprecipitant 543
Robert B. Fritz, Sylvester Lassiter and *Eugene D. Day:* The effect of iodination on the precipitin reaction. The anti-*p*-azophenyltrimethylammonium (anti-Ap) hapten system 557
Elizabeth Robez Einstein, Judit Csejtey, W. J. Davis and *Helene C. Rauch:* Protective action of the encephalitogen and other basic proteins in experimental allergic encephalomyelitis 567
Marion Waller, Nellie Curry and *Jean Mallory:* Immunochemical and serological studies of enzymatically fractionated human IgG globulins—I. Hydrolyois with pepsin, papain, ficin and bromelin 577
L. Berrens: Digestion of atopic allergens with trypsin α-chymotrypsin and pancreatic kallikrein, and influence of the allergens upon the proteolytic and esterolytic activity of these enzymes 585

Aims and Scope

mmunochemistry involves the specialized disciplines of many fields of physical, biological and medical ences. Most investigators who are interested in immunochemistry are specialists in one or more of these ciplines and, as a result, immunochemical literature appears in a wide variety of journals and other types publications. The purpose of *Immunochemistry* is to eliminate the necessity for such dispersed publication serving as a specific medium for material dealing with the chemical and physical aspects of immunology d related problems. The Journal is not intended to replace any of the present journals dealing with general munology but is to be more specifically a chemical journal dealing with antigens and antibodies, physical ects of immune mechanisms and methodology or investigations related to such subjects.

Several types of articles will be published including book reviews. The major type will be original experi-ntal investigations that have not been previously published and that can be considered as complete rather an preliminary reports. Manuscripts will be reviewed by at least two experts and their evaluation will form e basis for the recommendations and decision of the regional editor. Full length papers of a theoretical ture also fall within the scope of *Immunochemistry*. Communications to the Editors will also be considered publication. These will be limited to space equivalent to about 1000 words including tables, figures and ustrations. These may be preliminary reports of original work (not abstracts), a theoretical analysis or a brief icle of an editorial nature dealing with some problem in immunochemistry. Sufficient information must be sented to justify conclusions. Communications to the Editors will be reviewed as critically as full length pers. In addition review articles dealing with recent developments in selected areas of immunochemistry d methodological articles describing immunochemical techniques will be included. Review articles will ually originate at the request of the Editors but consideration will also be given to contributions suggested potential authors.

Since this Journal is intended for international participation by investigators in the field of immunochemistry anuscripts will be published in either English, French, German or Spanish. Pergamon Press will translate ssian manuscripts into English for review and if accepted, the publication will appear in English.

The contents of contributors shall be the sole responsibility of the Authors. Publication shall not imply e concurrence of the Editors or Publishers with the Authors' interpretations, conclusions or validity of data.

Notes for Contributors

Submission of manuscripts. Manuscripts should be sent to one of the Regional Editors. Contributions om France should be sent to Professor Bussard; those from Switzerland and the British Isles should be sent Professor Isliker. Manuscripts from other European countries, Australia and Africa may be sent to either the above two Editors. Manuscripts from the Eastern United States, Eastern Canada, Mexico, and South merica, should be sent to Professor Karush; those from the Western United States, Canada and Asia should e sent to Professor Campbell. Manuscripts from the U.S.S.R. should be sent to Dr. Nezlin.

Form of contributions. Although manuscripts may be submitted in either English, French, German, panish or Russian, publication will be limited to the first four. Russian manuscripts will be translated and ublished in English if approved. All papers must have an accompanying abstract in English as well as in the nguage used for the article. All contributions must be submitted in typewritten duplicates and with lines least double spaced and with margins which provide sufficient space for notations. Submission of three pies of the manuscript will facilitate refereeing and rapid publication. Manuscripts dealing with experi-ental work should be divided into major sections such as Introduction (optional), Experimental (with aterials, Methods and Results) followed by Discussion, Conclusions and Bibliography. If a large number of bbreviations are used, e.g., sRNA, EA, Ag, EEM, etc., it may be advisable to include a glossary defining such erms.

The title, with authors and their affiliations, should be placed on a separate page. On the same page give n abbreviated title to be used as a running headline.

References should be indicated consecutively as they appear in the text by arabic numbers in square, .g. Franklin[1]. The full references should be cited in a numbered list at the end of the paper using the llowing style:

. FRANKLIN E. C., FUDENBERG H., MELTZLER M. and STANWORTH D. R., *Pro. natn. Acad. Sci. U.S.A.* **48**, 914 (1962)
. CAMPBELL, D. H. and LANNI F. *Amino Acids and Proteins* (Edited by GREENBERG D. M.) p. 649. Thomas Springfield, Ill. (1951).

Footnotes. Statements or references which do not fit into the text of the paper or literature references ay be noted by the following symbols: *, †, ‡, §, starting afresh on each page, e.g., . . . crystalline trypsin *. ootnotes should be typed at the bottom of the page on which they appear.

Tables. All tabular material, flow charts, etc., should be typed on a separate manuscript page and should e intelligible without reference to the text. Headings should be concise, should clearly present the subject natter, and should be a part of the table. Footnotes to tables should also be placed on the same page and lesignations should use some system such as superscripts [a], [b], [c], etc., instead of numbers.

Graphs and illustrations. Figures and illustrations, which must be kept to a minimum, should be included eparately and not as part of the text. They should be about twice the published size and be clearly marked on he back as to top, number and author's name. Either the original or glossy prints may be used if care is taken n making good reproductions. Indicate on the manuscript where figures or illustrations should be inserted. Legends should be given on a separate page and clearly present enough information to make the figure under-standable. The following standard symbols should be used on line diagrams:

▲ △ ▼ ■ ▽ □ × + ● ○

General considerations. It is important to all concerned that a manuscript be carefully read for errors nd clarity before sending to an Editor.

Reprints. Where the research is supported by a fund which can be used for page charges, the author is nvited to make a voluntary contribution towards publication costs, in which case 100 free reprints are provided. Further reprints in multiples of 50 can be obtained at reasonable cost if ordered before publication, nd an order form for this purpose will be sent to the author.

Proofs will be sent to the first-named author for checking. *Corrections to the paper at this stage must be restricted to typographical errors.* **Any substantial alterations may be charged to the author.**

PRINTED IN GREAT BRITAIN BY A. WHEATON & CO., EXETER
